

## **ReeCourse Fairways Formula Golf Course Fairways Application Instructions For Bare Spot Repair**

**General:** The below instructions are recommended for application of ReeCourse Fairways for small bare spots that the golf superintendent would like to have blend in with the adjacent turf.

**Aeration:** If possible, aerate the bare spots before application to maximize penetration of ReeCourse Fairways into the root zone.

### **Application Program:**

- Dilute ReeCourse Fairways at a rate of 6 oz. per gallon of water in a pressurized sprayer (either hand or powered).
- Spray the diluted solution liberally over the bare spot (at least two passes of the spray wand).
- Perform this once every two weeks until the spot is repaired.
- Provide periodic maintenance sprays as needed following this treatment, unless the fairways receive the normal recommended monthly rate of ReeCourse Fairways.
